

Speech-enable System C CareFlow with Dragon Medical One

Making it faster and easier for clinicians to update the electronic patient record (EPR).

Seamless experience across care settings

Nuance collaborates with System C to enable more complete, accurate, and timely documentation within the EPR— improving patient care and increasing staff satisfaction. Our AI-powered speech recognition solution Dragon Medical One seamlessly works with CareFlow and delivers 99% accuracy from the start with NO voice profile training required.

Dragon Medical One is a cloud-based solution, providing doctors, nurses and allied health professionals with a single voice profile that can be accessed on different devices in different locations. Individual user speech profiles, including custom vocabularies and autotext templates, are sharable across devices and apps. With Dragon Medical One, clinicians can document directly within the clinical workspace or generate voice-driven content outside of CareFlow.

Use voice commands to navigate CareFlow more quickly and easily:

- Dictate at the cursor within CareFlow modules and mobile application
- Dictate into the EPR with a mobile device (an alternative to using a tethered microphone) using the Nuance PowerMic mobile application which is supported on iOS and Android platforms

Dragon Medical One in the CareFlow EPR offers cloud-based and secure speech-enabled documentation for clinicians on the go, accessible through any browser with no additional software to install or usernames/passwords to remember.
